Who we are

We are AUMOVIO Engineering Solutions (AES) – a global **engineering** and **technology** partner delivering **turnkey**, future-ready **mobility solutions**.

We are:

- A **one-stop shop** from idea to product
- A **gateway** to **high-volume automotive technologies**
- A team of **1,600+ engineers & specialists**
- Providers of **future mobility solutions for automotive & beyond**

We transform ideas into reality –
efficiently, collaboratively, and at scale.

Strategic value creator for AUMOVIO

Within **AUMOVIO**, AUMOVIO Engineering Solutions plays a unique and complementary role:

- We are the **extended R&D** arm of the business areas (BAs), offering **agile engineering** support across architectures, **autonomous mobility**, **user experience**, **electrification**, **software**, and more.
- We act as a **strategic gateway** into **niche markets**, providing **tailored engineering** and **manufacturing solutions** to customers beyond the traditional OEM landscape.

Our new brand: reenergized & future-focused

A more powerful **identity** that brings together **20 years** of shared **experience** and **industry trust**, clearly representing our **end-to-end engineering expertise** and elevating the **AUMOVIO sub-brand**.

Our rebranding strengthens our positioning:

- **Reenergizing** 20 years of customer trust
- **Fundamental shift** from services to solutions
- **Entering new mobility markets** like people movers and urban air mobility
- **Aligning closer** with the AUMOVIO identity

Reenergizing **20 years**
of **customer trust**

Entering new mobility markets
like people movers and urban air
mobility

Fundamental shift from
services to solutions

Aligning closer with the
AUMOVIO identity

Solutions and capabilities

What we offer

Customized automotive technology

We apply high-volume technologies to specific small series projects and use-cases in different markets

Chassis

Drivetrain

Vehicle body & comfort

Cockpit & infotainment

Driver assistance & autonomy

Network & connectivity

General engineering solutions

We support the development of components & systems for mobility and ensure product functionality & conformance

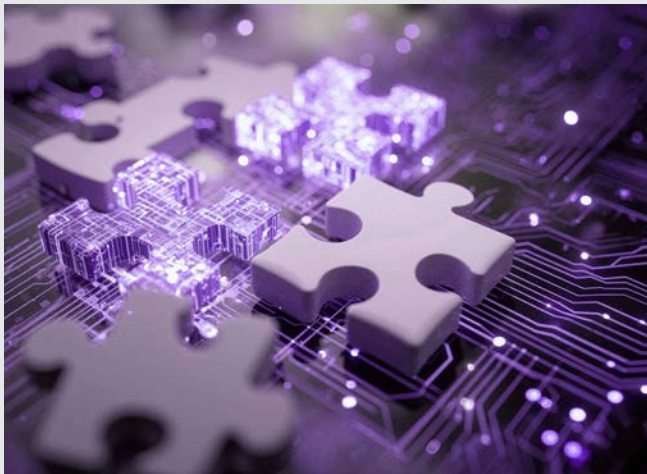

IT & data management

We support transformation to a data driven organization and optimize IT systems

Prototype & manufacturing services

We manufacture according to your design and provide solutions for sustainability

Training, consulting & assessment

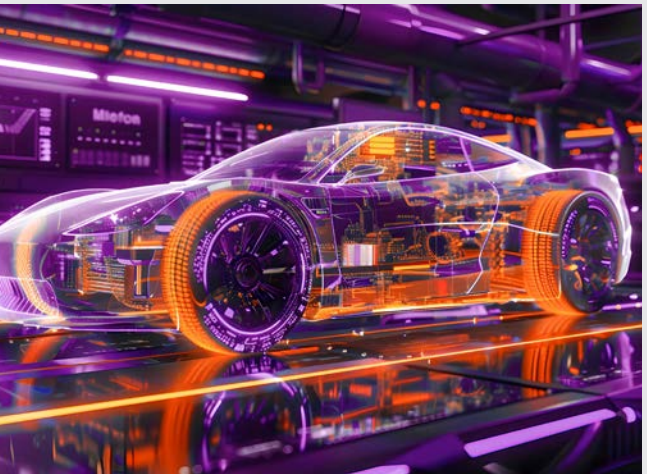

IT & data solutions

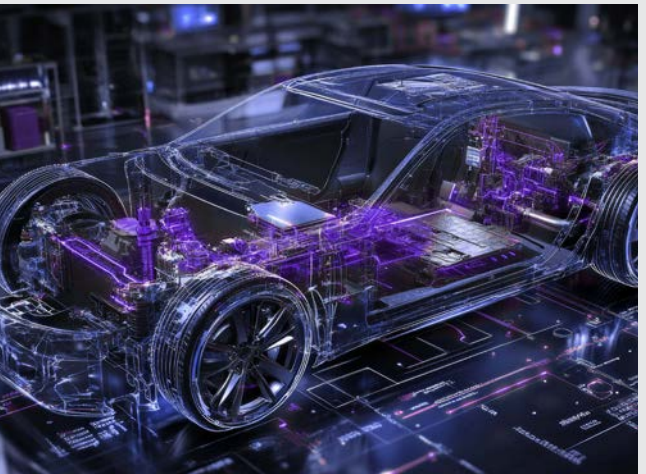

Prototype & small series manufacturing services

Concept & systems design

Integration, test & simulation services

Expert support

Manufacturing capabilities

Series production services

We offer manufacturing solutions for IATF 16949:2009 certified series in manual, semi-automated or fully automated production and at any point in the product lifecycle.

Design & manufacturing solutions

We help to bring product visions to life by providing expert consulting on design, technologies and product industrialization, combining both innovative and traditional approaches.

Sample services & parts

We specialize in custom metal, plastic, and electronic parts, from individual components to batch production and connect parts and technologies into a complete sample.

Repair & Remanufacturing

We contribute to sustainability by realizing repair and remanufacturing solutions to help extending the lifecycle of products, promote resource efficiency and minimize waste.

Strategic sectors

We leverage our engineering foundation to support a diverse range of sectors. This covers transport mobility (people movers, trucks & buses), motorsports (including powersports and 2-wheelers), and mobility beyond automotive such as railway, urban air mobility, and agriculture. We also deliver IT & data solutions and industrial digitalization services that bring advanced analytics, AI, and smart factory insights to manufacturing and other industrial environments.

2-wheelers

Motorsports

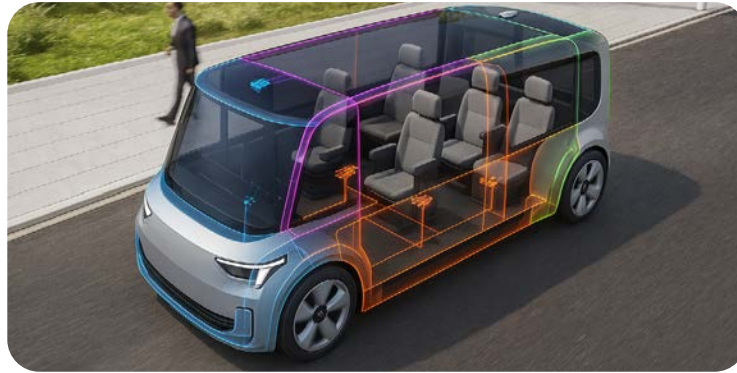

Electric vehicles

Urban air mobility

Railway

Autonomous mobility

Aviation

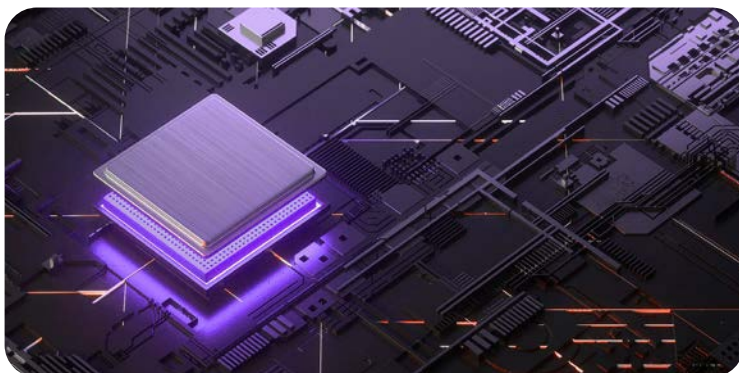

Agriculture

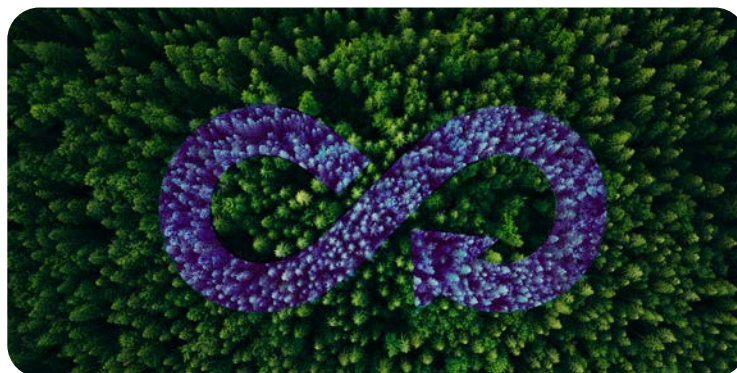

Trucks

Production

Software

Sustainability

How we work: strengths that set us apart

- Access to the full **AUMOVIO portfolio**
- **Agile & customer-centered** collaboration
- Global, **dynamic** project staffing
- High-volume **expertise** applied to niche needs
- **End-to-end solutions** – from concept to manufacturing
- **Impact-oriented** engineering & production

We combine speed, depth, and flexibility – making us the partner of choice for ambitious engineering challenges.

Customer testimonials

For over four years, we have collaborated with the Data Services team at AUMOVIO Engineering Solutions

(AES). Their expertise and training offerings have been highly valuable: more than 1,000 of our colleagues have received expert guidance in Data Science and Engineering. AES has supported us with strategic advice on Digital Transformation and AI Implementation across key areas such as R&D, Energy Management, Production Planning, Predictive Maintenance, Supply Chain Management, and HR. This partnership has been exceptionally fruitful, and we look forward to continuing our successful collaboration.

When we started the Industrial Software Competency at AWS,

6 years ago, we had the vision of an interoperable, always connected, analytical and higher automated manufacturing picture drafted. This solution from AUMOVIO Engineering Solutions is a great example to make this vision true. Analytics of distributed and diverse MES systems is a reality, we have to cope with. Thanks for making this, practice proofed solution, available to all AWS Manufacturing customers!

Exciting news from our partner AUMOVIO Engineering Solutions – their first solution,

STATMES SPC, is now available on AWS Marketplace!

By simplifying access to powerful Cpk and Ppk analytics, AUMOVIO is supporting manufacturers in leveraging data-driven quality insights without added complexity. A great example of how innovation and practicality can go hand in hand. Congratulations to the Aumovio team on this milestone and their continued commitment to advancing digital manufacturing. Thank you for your trust.

AUMOVIO Engineering Solutions : Thanks! THE REMAKERS is a strategic subsidiary of THE

FUTURE IS NEUTRAL : 75 years of innovation in remanufacturing to shape the future of a circular and competitive automotive economy, and two innovation awards in 2025 for the complete remanufacturing of a powertrain for electric vehicles, including motor and power electronics. Moving forward.

What a great success story of AUDI AG & AUMOVIO Engineering Solutions about data-

driven sustainability. It is great to see data science, machine learning, and MLOps as crucial parts of energy analytics on the way to Mission:Zero. We are super grateful that KNIME is part of this journey.

I’m looking forward to supporting the #AUMOVIO team with OpenECU controller hardware and toolchain solutions.

It was an honor for me to be a leader of this project. I am very excited to see the car finally on the public road.

Innovation at Land Life doesn’t stop in the lab: it comes to life in the field.

Together with our partners AUMOVIO Engineering Solutions and Incotec we’ve

designed a game-changing tree seeding robot (TSR) that brings precision, efficiency, and data-driven impact to large-scale reforestation.

The partnership between Nestlé and AUMOVIO was instrumental in driving a true shift in how we work with data.

Through KNIME trainings, we went beyond technical upskilling and enabled a cultural transformation, moving from manual Excel-based logic to automated, scalable, and auditable workflows.

We don’t just support projects – we deliver impact that matters.
